Description of <h1> Tag and <p> Tag in HTML

<h1> Tag (Heading Tag)

- The <h1> tag is used to define the **main heading** of a webpage.
- It represents the **most important title** of the content.
- Text inside <h1> appears **larger and bolder** by default.
- It helps in **structuring content** and improves **search engine optimisation (SEO)**.
- Usually, **only one <h1> tag** is recommended per page for clarity.
- HTML provides **six levels of heading tags**, used to define the **importance and hierarchy** of content.

Tag	Description	Size / Importance
<h1>	Main heading / Title	Largest & most important
<h2>	Sub-heading	Second largest
<h3>	Section heading	Medium
<h4>	Sub-section heading	Smaller
<h5>	Minor heading	Very small
<h6>	Least important heading	Smallest

Example:

```
<h1>Welcome to My Website</h1>
```

Usage:

- Page title
- Website name
- Main section heading

<p> Tag (Paragraph Tag)

- The <p> tag is used to define a **paragraph of text**.
- It displays normal-sized text and adds **space before and after** the paragraph.
- Used for descriptions, explanations, and content text.
- Improves readability of the webpage.

Example:

<p>This website provides information about HTML basics.</p>

Usage:

- Descriptive text
- Explanations
- Content paragraphs

Scenario-Based Question 1

Scenario:

A university website needs to display:

- University name as the main heading
- Department name as a subheading
- Course description below it

Question:
